SOM Background

- Developed in 1982 by Teuvo Kohonen
- Neural network algorithm using unsupervised competitive learning
- Primarily used for organization and visualization of complex data
- 2-dimensional pictorial representation of complex data
- Uses SOM Toolbox, version 2.0
(<http://www.cis.hut.fi/somtoolbox>)
- Analysis and visualization performed using Matlab

SOM Invasive Species Data

- CABI Crop Protection Compendium
- 238 geopolitical regions
- 103793 distribution records
- Data clean-up. Removed records labeled
 - No information available; Unconfirmed record; No Information Listed; Last reported Introduced, not established; Introduced, estab. uncertain; Eradicated; Absent, unreliable record; Absent, no pest record; Absent, confirmed by survey; Absent, formerly present; Absent, intercepted only; Absent, invalid record; Absent, never occurred; Absent, reported not confirmed
- 98100 clean distribution records
- 5636 distinct pest species
- **1,341,368 data points**

Poland Pest Risk Rankings

- ▶ Analyses allow us to visualize how geo-political regions are associated based on their known pest assemblages
 - ▶ Use of region Best Matching Unit (BMU) neuron weights (i.e., Euclidean Distance) can be used to assign risk rankings to pests not known to occur in a region
 - ▶ Objective prioritization and ranking of pests
-
